Project Documentation

Project: Global Olympic Sports Performance Analysis

Project summary

The Global Olympic Sports Performance Analysis project uses data analysis and visualization to explore Olympic medal outcomes, participation, sport categories and, where reliable data is available, sports investment. The deliverables are intended to include a Tableau dashboard, Tableau Story, interactive website, and supporting documentation.

Approach

- Review and clean source datasets.
- Validate relationships and measures.
- Build and test charts in Tableau.
- Create a dashboard and Story with meaningful captions.
- Publish the Tableau work and embed or link it from the website.
- Document findings and data limitations.
- Store source files and final deliverables in a clearly organized repository.

Project links — replace placeholders

- Published Tableau dashboard: [ADD TABLEAU PUBLIC LINK]
- Tableau Story: [ADD TABLEAU STORY LINK]
- Website URL: [ADD DEPLOYED WEBSITE URL]
- GitHub repository: [ADD GITHUB REPOSITORY URL]
- Demo video: [ADD GOOGLE DRIVE VIDEO LINK]

Final findings

Add only findings verified from the final dataset and charts. Include the exact time period, metric definition and relevant chart for each finding.

Submission checklist

- Verify all links are public and open correctly.
- Replace all bracketed placeholders.
- Include the final Tableau workbook (.twb or .twbx) if permitted.
- Include completed assignment templates and PDFs if required.
- Include the final demo video or its share link.
- Ensure data files are licensed and safe to share publicly.
