Visualization Plan

Project: Global Olympic Sports Performance Analysis

Core visualizations

- Top countries by total medals — horizontal bar chart; supports country comparison.
- Olympic medal trends by year — line chart; shows changes over time.
- Medals by sport — bar chart; compares sport categories.
- Gold/silver/bronze composition — stacked bar or donut chart; shows medal mix.
- Athlete participation by country or sport — bar chart; requires a clearly defined participation measure.
- Summer versus Winter — comparison chart; use only if season data is available.
- Investment versus medal outcomes — scatter plot; requires compatible investment and medal metrics.
- Regional efficiency — bar chart; requires a verified region field and efficiency calculation.
- Sport and sex comparison — grouped or stacked bar chart; requires a sex/gender field and a defined medal-record measure.

Suggested dashboard filters

Year, country/NOC, sport, season and region where those fields exist and are validated.

Interpretation guidance

Use chart titles that identify the measure and time period. State whether values represent medals, medal-result records, athlete-event records or unique athletes. Avoid interpreting correlations as causes.

Suggested storytelling sequence

- Start with the overall medal picture.
- Compare leading countries.
- Show trends across Olympic years.
- Compare sports and medal composition.
- Introduce participation and efficiency with clear definitions.
- Discuss investment comparisons only after verifying data compatibility.
- End with limitations and practical recommendations.
